**Project:**

- **Accuracy Constrained Privacy Preserving Access Control Mechanism for Relational Database.**

Access control mechanism protects sensitive information from unauthorized users. Sensitive information is shared and a Privacy Protection Mechanism is placed so that an unauthorized user will not be able to breach the privacy of a person leading to identity disclosure. PPM uses suppression and generalization of relational data to anonymize and satisfy privacy requirements against identity and attribute disclosure.

**Technology used:** JAVA

- **Hospital Management System, (Mini Project).**

Hospital Management System aims to cover a wide range of hospital administration and management processes. It is an integrated end-to-end application that provides relevant information across the hospital to support effective decision making for patient care, hospital administration and critical financial accounting, in a seamless flow.
